The Ministry of Health 'Change Source Facility' on Replacing Imported Raw Materials with Domestic Raw Materials in Medicinal Drug Manufacturing

The Ministry of Health issued a press release about the change source facility brought by the Indonesian government on June 2nd 2022. This initiative is intended to replace the source of imported raw materials with domestic raw materials for medicinal drug manufacturing in Indonesia.

This Change Source Facility is a form of the government's effort to prioritize the use of Domestic Product Materials (PDN) and an act of realizing the resilience of the pharmaceutical sector in Indonesia. This facility is also in line with the mandate of Presidential Instruction No. 2 Year 2022 concerning the acceleration of domestic, micro, small businesses, and cooperatives products utilization in the context of the Proudly Made in Indonesia National Movement (BBI).

This Change Source Facility has started since 2021 according to Director General of Pharmaceuticals and Medical Devices. However, the ministry hoped that the result will be completed in September 2022 when the health service facilities could use the e-Catalogue where the products information will be provided.

In addition to accelerating the utilization of domestic medicinal raw materials, the government also encourages the Ministry of Health Director General of Pharmacy and Medical Devices to develop plasma-based drugs and instant drugs.

For your reference, please check the official Ministry of Health press release on the Change Source Facility kick-off in Bahasa Indonesia in the link [here](#).
